

Individual Final Report
Machine Learning II
Kristin Levine

Honestly, I don't have much to add to the group final report. Sertan is a joy to work with and we shared the work extremely evenly. Despite the difficulties of collaborating during a pandemic, we utilized text, emails, phone, GitHub, google drive, and video calls to stay in touch and share ideas.

In fact, that was my favorite part of working a group. Whenever I had a problem, Sertan was able to provide another perspective and help me out. I feel like I did the same for him. Bouncing ideas off each other was the most fun part of the project. It also kept us from getting stuck on any particular part – because if one person was having trouble with a particular aspect, the other person was usually able to figure it out. It was also great to see how other people code things and organize a workflow.

Finally, it was great to see how things came together. Code that I thought was difficult a year ago (say Random Forest algorithm) seemed very straight forward this time around. It's nice to feel that you are improving. I really enjoyed and learned a lot from this assignment.

The file of rough draft code is just to show how we worked each day, saved previous versions, and improved on each previous day's work.
